Score: 0-100 deal score vs. the Est. price (50 = at that price, 100 = far under, 0 = far over), plus a small nudge from this ad's own Views relative to its age; blank when there aren't enough comparable cars currently on the market. Est. price: a price estimate from an accumulated database of private-seller and dealership listings of the same make/model across Quebec that grows with every scan (only active listings count; sold ones are kept for a year for reference), with outliers trimmed, more-recent listings weighted more heavily, mileage interpolated when there's enough data, and salvage/rebuilt-title cars excluded entirely - shown as P (Private) / D (Dealership) when there are 3+ comparables of each, otherwise one blended figure; number in parentheses is how many comparables that figure is based on. The Score above uses the Private figure only, full stop (dealer asking prices run above private-market value, so no dealer price ever factors into the Score) - a listing with too few Private comparables on file yet simply goes unscored. Comments: short tags from the ad's title/description, each marked (issue) or (good) - vague, no-signal component mentions are left out rather than tagged.
